quality concrete products

CONCRETE

FEEDER

SYSTEM.

www.cwpconcrete.com

A simple, sturdy and flexible feeding solution for your livestock.

Our feeder system combines heavy-duty concrete blocks with robust timber inserts to create a reliable setup that's quick to install and easy to adapt.

What's included?

- 2 Concrete Blocks (165kg each)
- 3 Timber Inserts (available in 15ft or 20ft lengths)

Why choose a feeder system?

Our feeder system is built to last. Solid concrete blocks combined with strong timber inserts create a durable setup you can rely on for years to come.

Installation is quick and simple, with no permanent fixings required, so you can have your feeding system ready to use in no time.

The system is flexible, designed to accommodate cattle of all ages and sizes, making it suitable for a wide range of livestock.

Layouts are easily adaptable. Standard sections come in 15ft or 20ft lengths, and bespoke sizes can be created to fit your farm perfectly.

Its design means you can buy the full system or individual blocks and timbers, giving you the freedom to expand or adjust your setup as your needs change.
